Allowable Subject Matter

1. Claims 7-12, 15-17, and 21-22 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The present invention is directed to congestion control in connection-oriented packet switching networks. Each independent claim identifies the uniquely distinct features:

4. Regarding claim 15, *ascertain whether X alternative paths exist with available resources able to satisfy a reduced Available Cell Rate of R'_{ACR} , if M alternative paths do not exist, wherein R'_{ACR} is less than the R_{ACR} , but is greater than a new available cell rate for the first path if rate control were instituted to eliminate the traffic congestion; and select one of the X alternative paths to reroute the traffic between the source node and the destination node if the X alternative paths exist.*

The closest prior arts, Shirai (5912877) and Hu (US 2003/0016808 A1) disclose conventional congestion control in networks, either singularly or in combination, fail to anticipate or render the above features obvious.

5. Regarding claim 16, *determining that there is an indication of traffic congestion in a first path connecting a source node and a destination node for a communication session, wherein the first path is a non-real time connection with an available cell rate of R_{ACR_i}*

the source node ascertaining whether M alternative paths exist with available resources able to satisfy the R_{ACR} for transferring traffic between the source node and the destination node, wherein M is equal to or greater than 1;

the node selecting one of the M alternative paths to reroute the traffic between the source node and the destination node if the M alternative paths exist;

the source node ascertaining whether X alternative paths exist with available resources able to satisfy a reduced Available Cell Rate of R'_{ACR} , if M alternative paths do not exist, wherein R'_{ACR} is less than the R_{ACR} , but is greater than a new available cell rate for the first path if rate control were instituted to eliminate the traffic congestion; and

the source node selecting one of the X alternative paths to reroute the traffic between the source node and the destination node if the X alternative paths exist, the selected alternative path replacing the first path for a remainder of the communication session.

The closest prior arts, Shirai (5912877) and Hu (US 2003/0016808 A1) disclose conventional congestion control in networks, either singularly or in combination, fail to anticipate or render the above features obvious.

6. Regarding claim 17, *means for ascertaining whether X alternative paths exist with available resources able to satisfy a reduced Available Cell Rate of R'_{ACR} , if M alternative paths do not exist, wherein R'_{ACR} is less than the R_{ACR} , but is greater than a new available cell rate for the first path if rate control were instituted to eliminate the traffic congestion; and*

Means for selecting one of the X alternative paths to reroute the traffic between the source node and the destination node if the X alternative paths exist.

The closest prior arts, Shirai (5912877) and Hu (US 2003/0016808 A1) disclose conventional congestion control in networks, either singularly or in combination, fail to anticipate or render the above features obvious.
